A STUDY OF SHORE FEATURES

A BOLD SHORE

Published by the

(Prof. Atwood's illustrations are reproduced by moving pictures)

The work of waves along a bold shore

Prof. Atwood draws a cross section diagram with detail illustrations of Sea Level, Waves, Sea Cave, and Sea Cliff. A perspective of a cliff and its shore line is indicated, followed by the perspective drawing of a cliff, with bays washed in.

Practically all the features of the bold shore are due to cutting away of the rock by the waves. Waves sometimes cut through weak places in the rock to form arches, which in time collapse

Last diagram resumed with Arch Rock, Gravel Bar, and Land Tied Island drawn in.

Moving pictures of a bold shore - carefully selected for their close similarity to what has just been drawn - give a clear and satisfying resume of material presented.

The diagram is resumed once more showing Rock Pillar, the result of the broken down arch; also a fjord, that indication of past glaciation.

A diagrammatic perspective of bold shores concludes the study.
